

Name _____

Porosity and Permeability

Porosity/Permeability Relationships

1. The spaces between particles of earth material are called _____.
2. _____ is the % of open space in an earth material .
3. How does pouring water into a beaker of beads tell us about the total pore space?

Porosity is independent of grain size as long as samples have same volume, shape and packing

Sorted

Unsorted

Porosity depends on shape: Rounded particles has higher porosity than angular particles

Shape	% Porosity
Round	
Oval	
Flat	

Round

Angular

Loosely packed particles have more porosity than closely packed particles

Packing	Porosity
Loose	
Tight	

Tight Pack

Loose Pack

Name _____

Porosity and Permeability

4. Questions A-F will be based on samples below-ALL HAVE SAME VOLUME!!!!

- A. Which sample (s) has the greatest amount of pore space? _____
- B. Which sample has the lowest porosity? _____
- C. If you were to compare the porosity of Sample A and Sample B, how would the porosities compare? _____
- D. Explain your answer to letter "C"

- E. What would happen to the porosities of all samples if they were mixed together?

- F. If particles are sorted, as particle size increases, the porosity of the particles.....

5. Answer questions G-I on the following diagrams

- G. Which sample has the highest porosity? _____
- H. Which sample has the lowest porosity? _____
- I. What is the relationship between shape and porosity? _____
- J. Which is most permeable? _____
- K. Which is least permeable? _____
- L. As particle shape changes from FLAT to OVAL to ROUND, permeability _____

Name _____

Porosity and Permeability

A. Large

B. Medium

C. Small

D. Mixed

Use the diagrams above to answer the following questions:

1. Which of the 4 samples is the most permeable? _____
2. Which sample is least permeable? _____
3. List the four columns in order of decreasing permeability:
 - a. _____ Most Permeable
 - b. _____
 - c. _____
 - d. _____ Least Permeable
4. What is the relationship between particle size and permeability:

5. List the 4 samples in order by using the time and rate needed for water to pass through them:

Time is how long it takes for something to happen

Rate is how fast something happens

_____ Took the least time

_____ Took most time

_____ Fastest Rate

_____ Slowest Rate

Capillarity is the ability for water to travel upward through the soil

1. Define capillary water: _____
2. What is the major factor that affects the force of capillarity? _____
3. As particle size decreases, capillarity _____
4. Water is attracted to LARGE or SMALL particles? _____
